

Can we do this project?
How are we doing on this project?
Am I getting the most out of my resources?
Easy questions to ask - but difficult to answer. Until now!

DOVICO Planning & Timesheet

Project planning and resource utilization

DOVICO Planning & Timesheet has been designed to bring project planning, resource utilization and time tracking together like never before. This project planning and forecasting tool gives managers the ability to easily determine how long a project will take and how much the project will cost based on resource availability. Get real-time data such as who is being underutilized and who is over utilized while also ensuring that your top employees are working on the mission critical projects.

Don't let your well intentioned project come in late or over budget. Plan it - then track it - to ensure success.

Project Planning

The Project Scheduling view is the fastest and easiest project planning and forecasting tool on the market. Add your tasks and hours of effort for each, then add dependencies and other conditions you want to set, then finally select your resources from the pick list available right in the view. Then click our "level" button to automatically see your projects timeline and costs.

Resource Allocation

See all your employees' scheduled work. It also highlights when employees will be away on vacation and not available to do work. Easily replace any employee in a project at any time by reassigning their tasks to another employee.

Time Tracking

An end-user interface that promises an easy transition from your existing project time tracking processes and methods. Get the correct information to the right people for quick approval and reporting. 85+ reports out of the box, extensive views within the application, email alerts when a project hits defined targets, custom reports, and much more.
